Bringing balance to an
unbalanced environment

BIRDS TRANSMIT DISEASES

THEY SPREAD HARMFUL ECTOPARASITES AND BACTERIA

Pigeons and other pest birds are widely acknowledged to carry or transmit Salmonella, Meningitis, and several other diseases. Each year, tens of millions of dollars in property damage is caused by build-up of feces, feathers, and other bird related messes. Acidic droppings of pest birds deface and accelerate the deterioration of buildings, statues and signage, which increases maintenance costs.

AVITROL IS A HUMANE SOLUTION

IN-DEPTH STUDIES PROVE THE PRODUCT HUMANE

Birds affected by Avitrol feel no pain. Using Avitrol for Pest Bird Control has been proven humane by renowned animal welfare advocate Harry C. Rowsell. Effective control of a pest bird flock can be obtained by targeting as little as 4% of the flock. It has also been proven that there is no secondary poisoning from Avitrol products.

USING AVITROL SAVES MONEY

KEEP PEST TREATMENT COSTS DOWN BY USING AVITROL

As compared to other techniques, Avitrol solutions do not require a large investment. Avitrol products solve pest bird problems without “breaking the bank,” allowing you to keep more of your hard-earned money. In addition, baiting with Avitrol does not require large, unsightly devices which means that the pest bird problem can be resolved without the use of excessive equipment during the baiting process.

A LIFETIME OF BALANCE

THE TREATED FLOCK WILL NEVER COME BACK

Avitrol is the only true chemical bird control product registered with the EPA, and significant research has gone into making sure that once a pest bird flock is treated with Avitrol, that flock will never return. PERIOD. While it's always a good idea to work out a monitoring program with your local Pest Control Operator to ensure that other pest bird flocks do not move into the vacated area, use of Avitrol products help to ensure that treatments provide you with a lifetime of balance to an unbalanced environment.
